Simulating randomness and probability with the random module

The random module provides functions for generating random numbers

To use the random module you must first import it

```
In [1]:  import random
```

One of the functions, randint() return random integers between and including 2 specified integers

```
In [2]:  for i in range(0, 10):
             print(random.randint(1, 100))
